**DESCRIPTION:** These polyclonal antibodies are prepared against a synthetic peptide corresponding to a distinct C Terminal region of each respective rat PKC isoform.

**STORAGE:** -70°C long term, -20°C less than one month. **Avoid multiple freeze-thaw cycles.**

**PRESENTATION:** These antibodies are presented as antiserum containing 0.05% sodium azide.

**SOURCE:** Human recombinant protein expressed in insect cells.

**SPECIES SPECIFICITY:** The immunogen sequence of these antibodies are based upon known homologies and cross-react with rat, human, mouse, bovine and rabbit among other mammalian species.

**APPLICATIONS:** Western blot: 1:250 recommended dilution using Alkaline Phosphatase detection method. These antibodies also have reported success in ELISA, immunohistochemistry, and immunoprecipitation.
